FORENSIC ANALYSIS REPORT

Blood Pattern Analysis & Classification

Report Generated: March 10, 2026 at 12:26 PM

EXECUTIVE SUMMARY

Analysis Component	Result	Confidence
Blood Detection	■ LIKELY BLOOD	93.2%
Weapon Type	Gun	100.0%
Point of Origin	(245.8, 246.0)	390 droplets

1. BLOOD DETECTION ANALYSIS

Verdict: ■ LIKELY BLOOD

Confidence: 93.2%

Color Analysis:

Coverage: 32.15%

Score: 100.0%

Detected Blood Types:

• Fresh Blood (Bright Red): 20.80%

• Fresh Blood (Deep Red): 11.20%

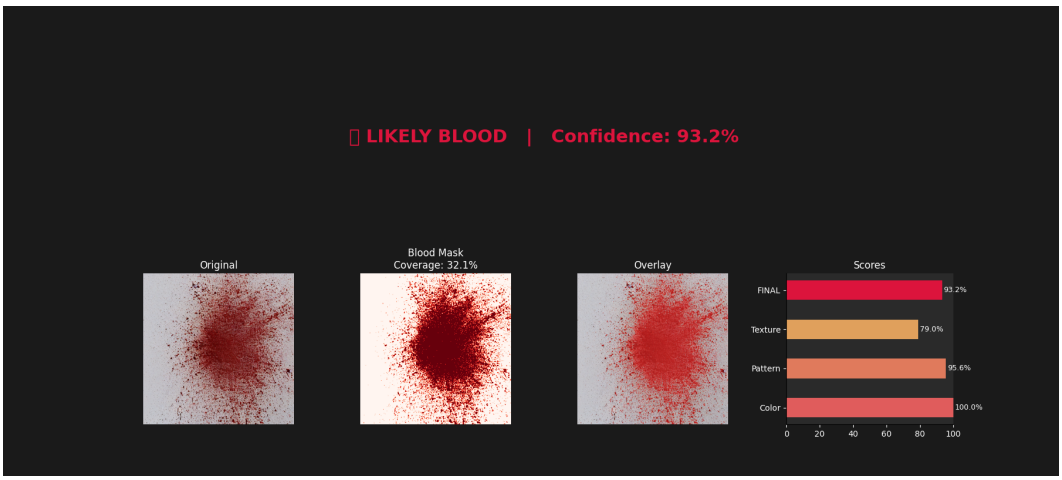
• Dried Blood (Brown-Red): 2.33%

Pattern Analysis:

Score: 95.6%

Components: 463

Satellites: 462



Blood Detection Visualization

2. WEAPON TYPE CLASSIFICATION

Weapon Type: Gun

Confidence: 100.0%

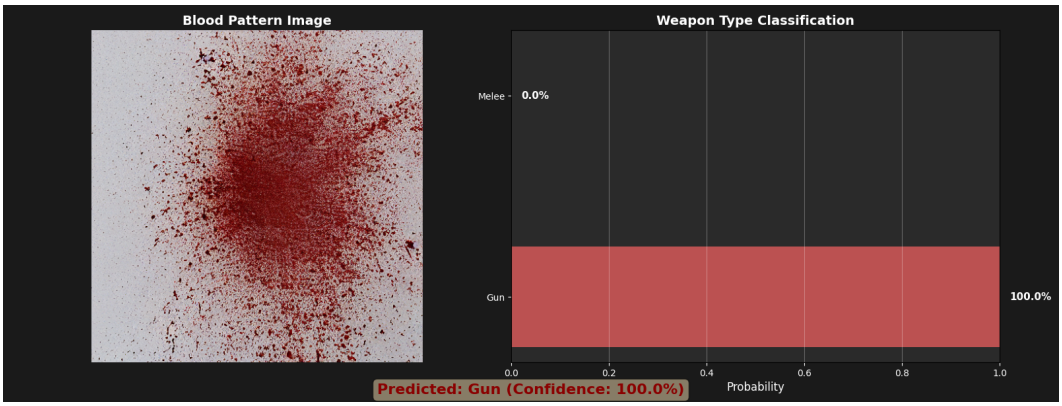
Detailed Probabilities:

• Gun: 100.00%

• Melee: 0.00%

Interpretation:

High/medium velocity impact spatter detected. Characteristics: Fine mist, small circular droplets, uniform distribution typical of gunshot wounds.



Weapon Classification Visualization

3. POINT OF ORIGIN ANALYSIS

Point of Origin: (245.8, 246.0)

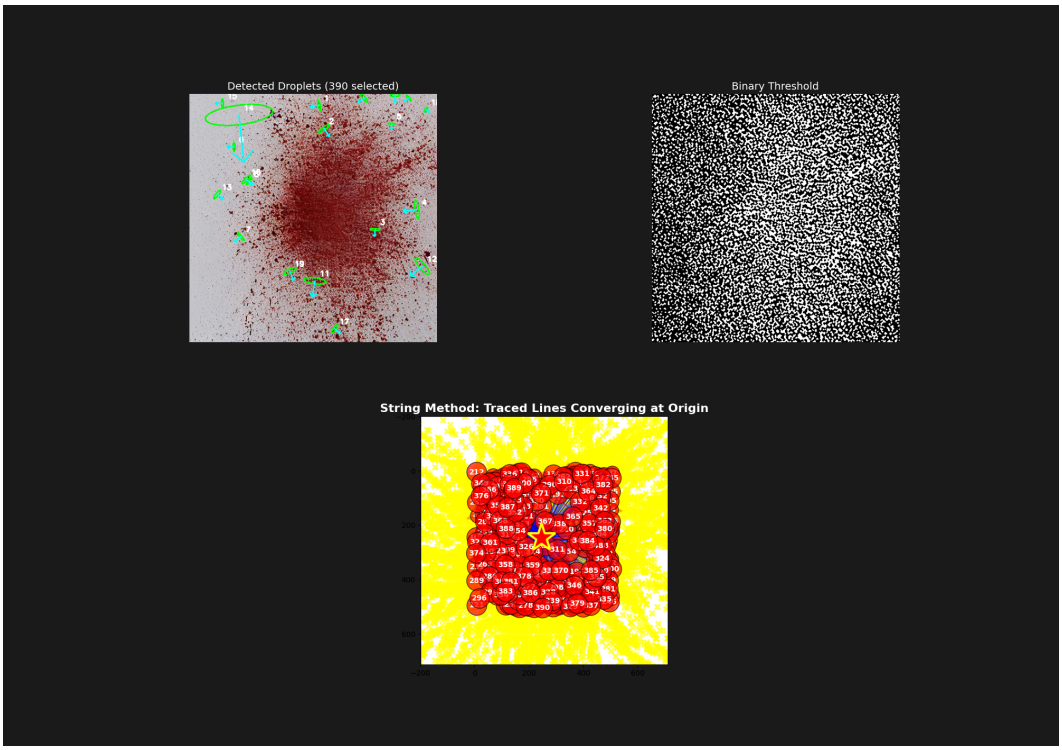
Analysis Statistics:

Droplets Analyzed: 390

Intersection Points: 38363

Average Impact Angle: 34.3°

Angle Range: 11.1° - 55.7°



String Method Visualization

DISCLAIMER

This forensic analysis report was generated using AI-assisted computational methods for blood pattern analysis. The results presented are based on image analysis algorithms and machine learning models trained on forensic datasets. **Important Notes:**

• This report should be used as a supplementary tool in forensic investigations
• Results must be verified by qualified forensic experts
• This report is not intended for sole use in legal proceedings
• Professional forensic confirmation is required for official documentation
• The accuracy of results depends on image quality and pattern clarity **Model Information:**
• Blood Detection: Computer vision analysis (HSV color space, pattern recognition)
• Weapon Classification: Deep learning CNN (TensorFlow)
• String Method: Classical forensic trajectory analysis with DBSCAN clustering For questions or concerns about this analysis, consult with certified forensic analysts.
